

# CNR ISMAR repeated CTD transects and stations

These transects and stations are repeated approximately every **6 months**, with surface to bottom CTDO-LADCP casts

An important component of the Ocean Observing System should rely on regular ship-based surveys, to provide data over the entire water column (more than **20% of Mediterranean volume** is deeper than **2000 m**) Schroeder et al.. *Oceanography*, 3 (2015).
